Teaching and Research Fields

Primary Fields: Macroeconomics, Asset Pricing

Secondary Fields: Behavioral Finance, Labor Economics

Job Market Paper

[“Belief Distortions, Asset Prices, and Unemployment Fluctuations”](#)

This paper studies the dynamics of asset prices and unemployment when expectations deviate from a rational benchmark. Using machine learning forecasts as a benchmark for objective beliefs, I quantify distortions in survey forecasts of firms' future cash flows. Survey forecasts overreact to cash flow news, while machine forecasts do not. These belief distortions explain over 60% of the variation in hiring at both the aggregate and firm levels. Following positive idiosyncratic shocks to their cash flows, firms with distorted beliefs overhire relative to firms with objective beliefs, while their stock returns initially overshoot and subsequently reverse. A search model in which firms learn about cash flows with fading memory reproduces not only the overreaction in beliefs but also the resulting volatility in asset valuations and unemployment. Distorted beliefs that raise asset valuations also raise the value firms attach to new hires, leading stock prices and hiring to move together.
